

Roughnecking 101[®] Version 3

Employee Qualification Program

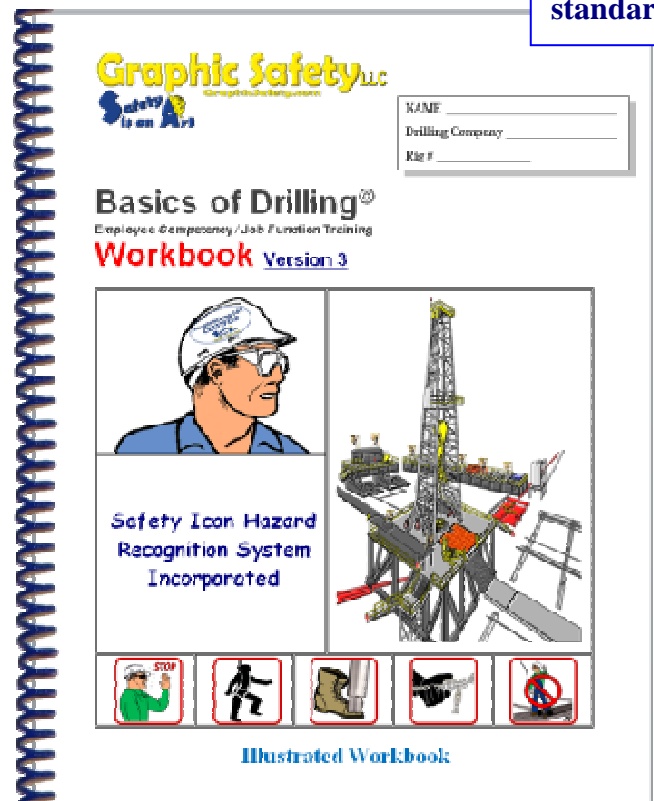

This ‘Drilling Rig Employee Qualification Program’ is a tough, no nonsense crash course in roughnecking. This course is how you can certify that your employees know their jobs – if they pass! Employees can repeat the course as many times as you allow until they pass. One thing is certain; those who pass the course know the business of roughnecking. The other employees will want to achieve that status as well!

The Roughnecking 101 Revision 3 Workbook is a training tool that meets the fast paced world of roughnecking with easy to use and easily recognized training issues. This Workbook teaches employees how to roughneck – safely. The workbook provides guidance for the roughly 180 identified jobs that roughnecks perform. This is truly making your rig into a classroom.

Revision 3 takes advantage of “lessons Learned” by matching the accident data mined from a dozen drilling companies. When seeking to solve accident problems, education and training is key. Instead of relying on senior employees past experience, this workbook outlines the right way to perform jobs on a drilling rig.

With the ‘Safety Icon Hazard Recognition System’ integrated into the manual, employees will be able to quickly recognize hazards known to exist in drilling operations, without viewing gory pictures. This same system is integrated into the set of 180 Drilling Operation JSA’s that can be purchased separately. The Safety Icons are also incorporated into many of the other training materials that GraphicSafety.com offers, including an Emergency Response Plan (ERP) for drilling Operations and a can be integrated into your safety manual.

This program covers ANSI, ASME and API standards!

Employees must prove 70% proficiency in order to pass.
