

Riding on Forklift

Forklifts are designed so that only one person would be on the forklift while it is being operated - The Driver! Nobody else should be on the forklift while it is moving. Never ride on the forklift or the forks while it is moving! Otherwise a serious accident could occur.

Finding a place to stand on the side of a forklift is awkward. This is because you were not meant to ride on the side of the forklift.

These kinds of accidents happen faster than you think. This is why we have company policies against behaviors like this. Don't violate the policy!
